

STEM What is STEM?

STEM is an acronym that stands for **science, technology, engineering, and math**. Rather than teaching each of these subjects on its own, STEM education takes a more inclusive approach, integrating all four areas into lessons and experiments. It teaches students how to solve tough problems, think critically and data in order to use the information.

It is an approach to the world, a critical way to understand and explore and engage with the world, and then have the capacity to change that world.”
