

# STEM Teamwork

A crucial part of **STEM** learning is working in teams.

**Teamwork** involves brainstorming with your fellow classmates, combining the best ideas to create a group building a novel together, and thinking of ways to improve it.

# REVIEW ONLY

**Collaboration** means working together to reach a goal.

Within a team, members sometimes take on certain roles.

Examples include health engineer, quality control engineer, operations manager, and communication director.

## School Datebooks

When working on a team, it's important *not to criticize* others' ideas. Not every idea will be a success or even something you pursue. In those cases, you'll have opportunities to advance ideas with your input.

**Practice** delivering your input in *question* form. Instead of saying, "That model is too large and won't work," try, "What if we made it smaller to fit the requirements better?"
