REVIEW ONLY

The use of tobacco is addictive. Most users develop a tolerance for nicotine and need greater amounts to produce the desired effect. Smokers become physically and psychologically dependent and will suffer withdrawal symptoms when they stop. Physical withdrawal symptoms include changes in body temperature, heart rate, digestion, muscle tone, and appetite. Psychological symptoms include irritability, anxiety, sleep disturbances, nervousness, headaches, fatigue, nausea, and cravings for tobacco that can last days, weeks, months, years or an entire lifetime.

Facts

- Nearly one in five high school males use spit tobacco. Continuous intake of spit tobacco leads to various oral cancers and a host of other diseases, in addition to bad breath.
- Smoking can cause or further increase stress, nervousness and agitation rather than calm you down.
- Addiction to cigarettes frequently leads to other forms of drug addiction.
- Cigarettes are a known carcinogen – begin that the more you smoke, the more you are exposed to the carcinogens.
- Cigarettes are highly addictive – one-third of the people who try to quit experience relapse, and one being addicted by the time they are 20.
- Did you know that secondhand smoke is responsible for approximately 3,000 cancer deaths annually of non-smokers in the United States?
